

Wonders that moved the  
world! Discoveries  
that altered perceptions!

Centre for Integrated  
**Robotic Research & Development**

## ABOUT US

Centre for Integrated Robotic Research and Development is an organization powered by Edu Mithra Intellectual Services Pvt. Ltd. that aims to see every Robo-aspirants dream come true. We at CIRRD are passionate about robotics and the future it holds for the world we live in today, thus we're here to be a platform for quality robotics education at the fundamental level as well as make it as entertaining and interactive as possible. We believe that every child who hopes to build their own robot deserves access to the education and hands on training required for the same and we're here to help make that happen.

## WHY CIRRD

Having young engineers amongst our very founders we know exactly what it's like being a young student eager to enter the world of robotics. That being said we've held many online as well as offline courses for young students all over the world and we are well versed in the conducting them. But most of all we simply love working with students who share our passion for robotics and nothing excites us more than to be a part of that journey.

After this workshop attendees will gain an understanding of the basics of the field as well as what its like to actually work on a robot. They will have built a robot themselves and therefore will have a very good idea of how to approach the same later on in the future. It will help develop good technical skill as well as programming skill which will be greatly beneficial, especially to those who are students.

## About the Workshop

Those attending the workshop will learn some of the basics behind building a robot as well as receive the hands-on training required for the same. In just three days attendees will learn how to build a fully functional robot as well as have a solid base for if they ever wished to make their own robot later on in the future. They will also gain exposure to the world of robotics and get an idea of all the various hardware components and software that play a role in making the same. It's the perfect place to start for all those who have ever dreamt of building their own robot.

The details regarding the various robotics projects are available on the CIRRD official website [www.cirrd.com](http://www.cirrd.com).

## THE ROBOTICS WORLD

Robotics is an emerging field in today's world. As we tread towards the era of IoT and Artificial Intelligence the scope for robotics is more than ever before and it shows much promise for those who seek to pursue it. Bearing that in mind this workshop organized by Edu Mithra aims to provide a platform for those who are eager to step into the world of robotics be it as a profession or just out of pure interest.
